## Term frequency-inverse document frequency

How important a term is compared to the rest of the documents

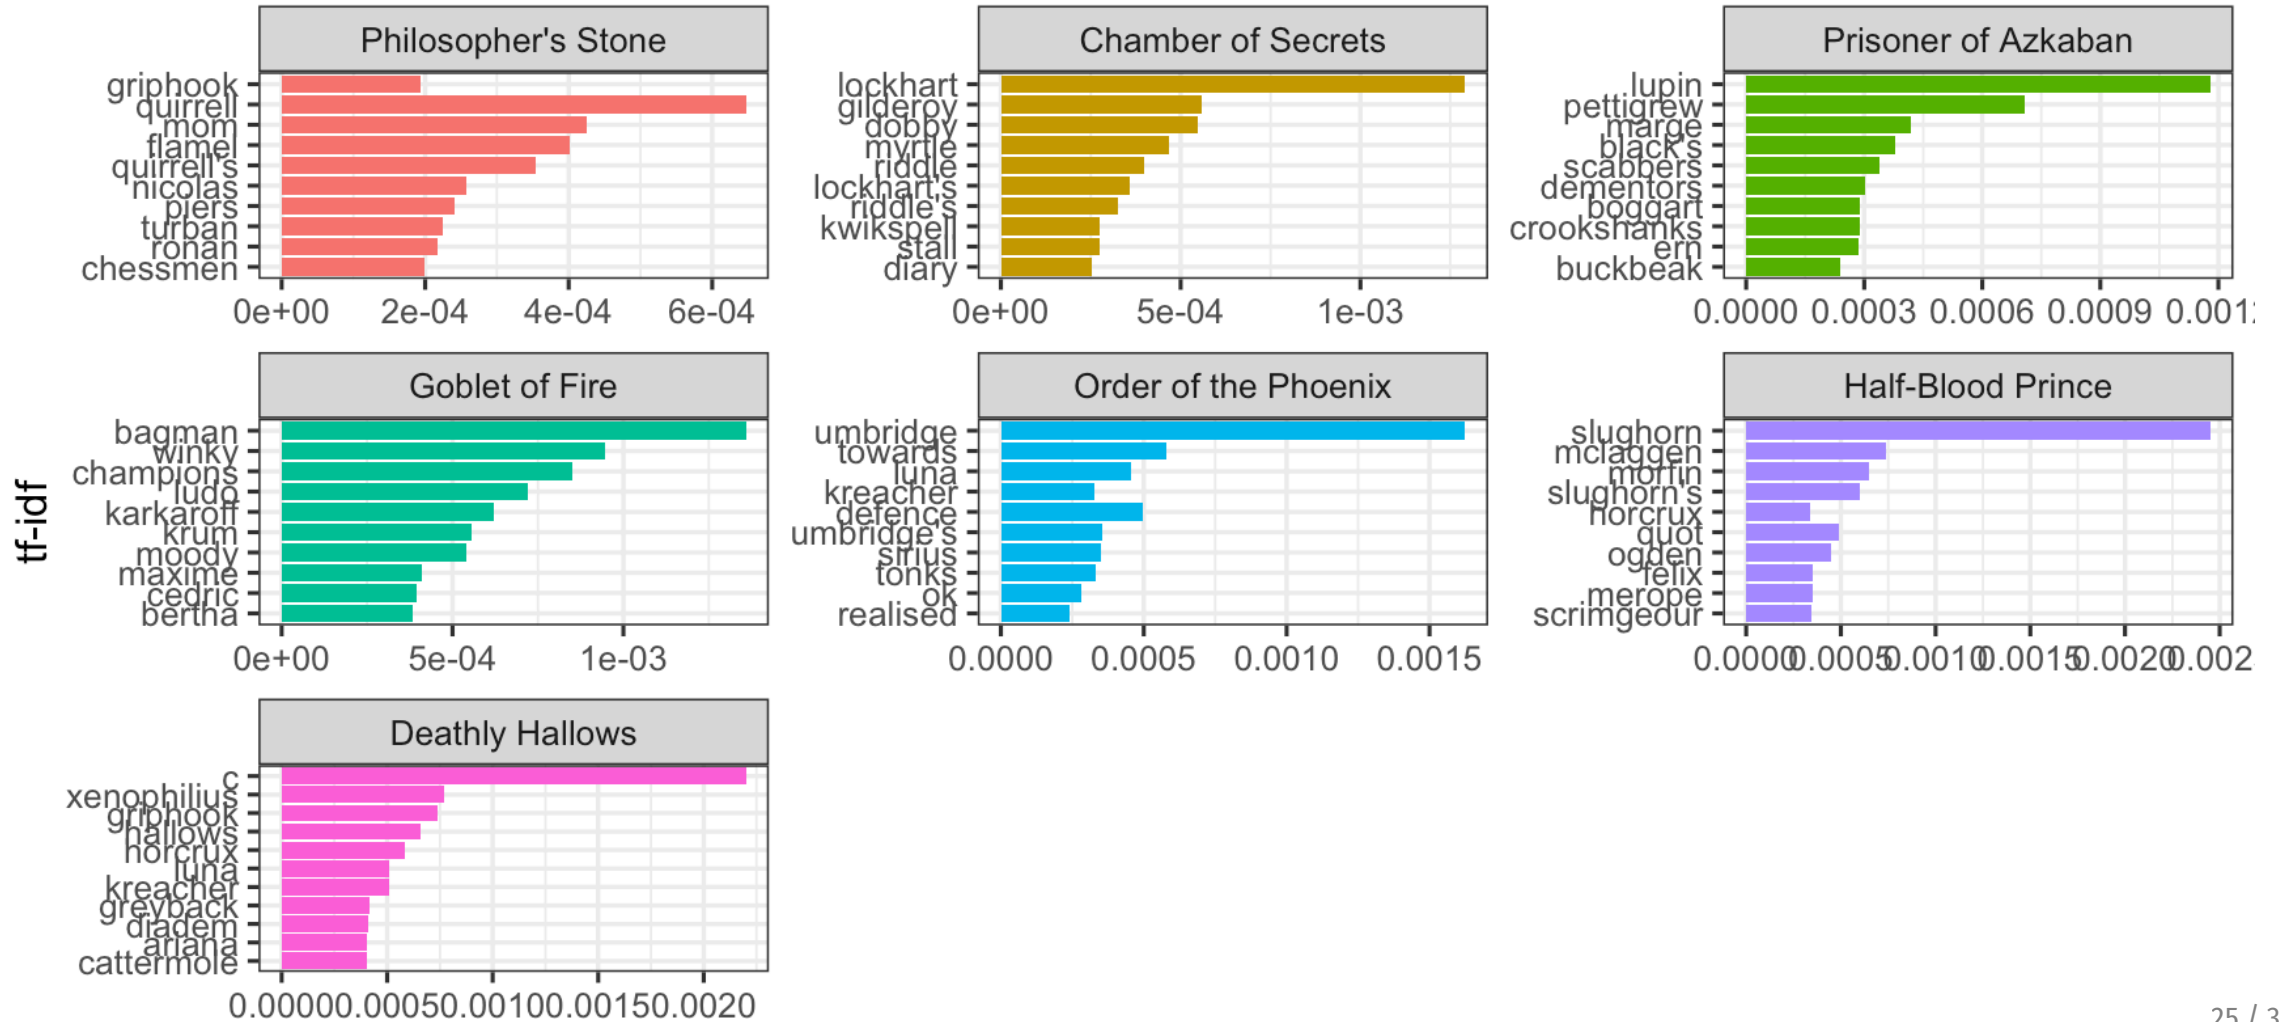

$$tf = \frac{n_{\text{term}}}{n_{\text{terms in document}}}$$

$$idf(\text{term}) = \ln \left( \frac{n_{\text{documents}}}{n_{\text{documents containing term}}} \right)$$

$$tf-idf(\text{term}) = tf(\text{term}) \times idf(\text{term})$$
